

# STATIC MIXER

## AVEKA ENVIRONMENTAL TECHNOLOGIES

Static Mixers are highly-engineered motionless mixing devices that allow for the inline continuous blending of fluids within a pipeline. With no moving parts, static mixers utilize the energy of the flow stream to generate consistent, cost-effective, and reliable mixing. Meeting a range of flow rates for a variety of applications, static inline mixers are the reliable, durable, and efficient solution to your motionless, continuous mixing needs.

- [Maintenance-Free](#)

Static Mixers are built to last using industrial grade materials specifically tailored to your application.

- [Low-Cost](#)

Static Mixers are a low-cost alternative to traditional tank mixers both at purchase and during the mixer's lifetime. There are no running costs associated with operating a Static Mixer on top of running your existing pipeline.

- [Low Energy Requirements](#)

Because static mixers are motionless by design, all the energy required to provide a perfect blend is provided by the energy of the flow stream.

- [No Moving Parts](#)

Unlike traditional mixers, static mixers remain motionless during the mixing process.

- [Custom-Designed for Your Application](#)

All Static mixers can be custom-tailored to fit your requirements.
